

Edycja, kasowanie

Zmiany w pliku **urls.py**

```
path("people/<int:id>/edit/", views.person_edit, name="person_edit"),
path("people/<int:id>/delete/", views.person_delete, name="person_delete"),
```

W pliku **people.html** dodajemy:

```
<a href="{% url 'person_edit' person.id %}">Edytuj</a>
<a href="{% url 'person_delete' person.id %}">Usuń</a>
```

pod:

```
<a href="{% url 'person_details' person.id %}">Szczegóły</a>
```

Dodajemy do **views.py**:

```
def person_edit(request, id):
    person = get_object_or_404(Person, pk=id)

    if request.method == "POST":
        form = PersonForm(request.POST)
        if form.is_valid():
            person.imie = form.cleaned_data["imie"]
            person.email = form.cleaned_data["email"]
            person.wzrost = form.cleaned_data["wzrost"]
            person.data_urodzenia = form.cleaned_data["data_urodzenia"]
            person.save()
            return redirect("people")
    else:
        form = PersonForm(initial={
            "imie": person.imie,
            "email": person.email,
            "wzrost": person.wzrost,
            "data_urodzenia": person.data_urodzenia,
        })

    return render(request, "appmonday/form_edit.html", {"form": form, "person":
person})

def person_delete(request, id):
    person = get_object_or_404(Person, pk=id)

    if request.method == "POST":
        person.delete()
        return redirect("people")

    return render(request, "appmonday/confirm_delete.html", {"person": person})
```

Tworzymy **form_edit.html**:

```
{% extends 'appmonday/base.html' %}
{% block title %}Edycja{% endblock %}
{% block content %}
<h2>Edycja osoby: {{ person.imie }}</h2>

<form method="post">
    {% csrf_token %}

    {% for field in form %}
        <p>
            {{ field.label_tag }}<br>
            {{ field }}<br>
            {{ field.errors }}
        </p>
    {% endfor %}

    <input type="submit" value="Zapisz zmiany">
</form>

<a href="{% url 'people' %}">Powrót do listy</a>
{% endblock %}
```

Tworzymy **confirm_delete.html**:

```
{% extends 'appmonday/base.html' %}
{% block title %}Edycja{% endblock %}
{% block content %}
<h2>Edycja osoby: {{ person.imie }}</h2>

<form method="post">
    {% csrf_token %}

    {% for field in form %}
        <p>
            {{ field.label_tag }}<br>
            {{ field }}<br>
            {{ field.errors }}
        </p>
    {% endfor %}

    <input type="submit" value="Zapisz zmiany">
</form>

<a href="{% url 'people' %}">Powrót do listy</a>
{% endblock %}
```
